Sources for Technical Description

1. <https://pubs.shure.com/guide/SM58/en-US>
 - This is the manufacturer's website. SHURE has very complex details and schematics of each of their products, not only microphones. A description of the product, the features, the placements for the microphone, the specifications, accessories, certifications, and drawings for the product are all provided on this website. Most of my information for the Technical Description will most likely be referenced to this website.

2. <https://www.shure.eu/support/downloads>
 - This website provides the specifications worksheet for the SHURE SLX Wireless microphones. Information such as the weight, power requirements, replacement parts, dimensions, etc. are all provided on this sheet.
 - This website ALSO provides the HISTORY of SHURE. From its beginning start up in 1939, to its wonderful journey to 2020. This company has been through a lot of changes, like most do, if they begin in the late 1930's and are still currently up and rising.

3. <https://fccid.io/DD4SLX2A/User-Manual/manual-1038564>
 - This website provides the schematic drawings for the microphone that helps me understand the components of the microphone.

*more sources will most likely be added to list as the drafting of my technical description comes along
